

# What's New in GeoTime 5.8

## Co-Travel pattern ▶

Calculate possible co-travel between entities inside your big data

## ▲ Geocoding

Search a location or address inside the program, then layer onto your analysis for quick insights

## ▲ Reporting improvements

Auto-sizing callouts, cell sector direction display, and supporting higher resolution maps

## ▲ Ruler upgrade

Measure distances between phone calls and locations of interest

## Improved Usability and Workflow

- Ability to define header rows for XLS/CSV files, and to truncate rows off end of file
- Cell sectors can now be rendered as arrows instead of geometries
- Time zone is now optional in the GeoTime timeline
- Event fit operations now include event duration and region.
- Easier and cleaner video capturing
- Define a custom delimiter for CSV files
- Ruler annotation now draws between two places

## Mapping Support

- Higher memory allocation for power users
- All extensions can now be installed and uninstalled separate from GeoTime
- Timeline is no longer partially hidden
- Higher resolution WMS maps now supported
- New default WMS server
- TOC Support for ArcGIS 10.4

## Time Savings

- Geocoding address lookup
- Auto-sizing detail callouts
- New Co-Travel pattern
- Detail Callouts (previously Event Detail Callouts) for places and link events
- Search keywords inside the Activity Matrix
